

EASY TO USE GNSS ROVER

With UnicontrolRover, you can measure and stake out points and lines easier than ever before. The intuitive interface provides easy access to menus and data – just a few touches on the screen, and you are ready to measure and stake out points.

INSTANT SYNCHRONIZATION

Working files are seamlessly and instantly synchronized via UnicontrolCloud. Files are shared directly with operating machines and workstations – a perfect synergy to save time and improve collaboration.

IMPROVED PRODUCTIVITY

An efficient tool for machine operators, supervisors and surveyors.

The integrated tilt-to-go function with up to 60° incline can increase productivity and deliver precision without stops!

MORE INDEPENDENCE

The needed support from surveyors and foremen decreases significantly, and the operator will be able to measure and stake out points and lines independently.

ABOUT UNICONTROL

Unicontrol develops GPS Systems for the construction industry. We are located in Denmark, and we always seek to have close cooperation with experts, contractors and distributors

We emphasize developing userfriendly and intuitive solutions to maximize the value we can deliver for operators and entrepreneurs.

UNICONTROL ROVER

Stake-out easier and faster

SYSTEM OVERVIEW

THE FAMILIAR UNICONTROL INTERFACE

- Stake out points and lines
- Create surface designs
- Make area calculations
- Share points and lines directly with operating machines and workstations

INSTANT SYNC BETWEEN ROVER, MACHINE & OFFICE

- Files are instantly synchronized via Unicontrol Cloud
- On-site documentation
- Instant availability of data for handling in office

GNSS RECEIVER

- Supports all standard signals (GPS, GLONASS, BeiDou, QZSS, SBAS & Galileo)
- Built-in Radio: 410 ~ 470 MHz
- Tilt function up to 60° incline - no calibration needed
- Working Time: RTK: 10 hours / Static: 14 hours
- IP67 Certification

4G LTE CONNECTION & BUILT-IN RADIO TRANSMITTER
