- Screen share - remote assistance
- Bucket calibration

UNICONTROL CLOUD

Unicontrol's cloud solution helps you save time and develop a paperless construction site.

With only a few clicks, you can upload project files from the office desktop to the on-site tablet.

KEY FUNCTIONS

SAVE TIME

Quickly create projects, upload design files, and assign or remove machines on a project.

VISUAL OVERVIEW

Get an overview of activities, geographical positions, and visual selection of coordinate systems.

PROJECT MANAGEMENT

Get an overview of active projects and share projects between different machines so that you can always see the operator's current projects.

QUALITY ASSURANCE

Download logged points to document to ensure the necessary quality demands. Unicontrol Cloud functions as a help-tool to avoid misunderstandings and mistakes during the building process.
